Hello Mr.Sato,
Thank You for encouraging us to ask questions when things seem difficult because if you hadn't I would have probably kept quiet and most likely failed the class. So Thank You.
Abel Getnet

Hi Mr. Sato! Thank you for writing my letter of recommendation and inspiring me to be a Chem major! I appreciate all the equations you gave me to balance during lunch in sophomore year, and thank you for letting me write an essay about air not being homogeneous. I still don't understand it 100% but that is okay.
Julia Khinno

you are the best

Hello Mr. Sato,

Although AP Chemistry is a tough class for both the student and the teacher, I would like to thank you for teaching us a class that most of us will refer back to for the rest of our educational career. I am impressed with what you have accomplished with the limited materials you have in distance learning and I am sure that it will reflect on test day.

Rohan Vashishat

hi mr. sato! even though i know we are both sad u dont have me as a student anymore, i really enjoyed your class and talking to you at the senior fiesta thingy. thank you for making chemistry a lot easier to understand and for your patience and excellent use of analogies when i needed help. you rock. have a great day!
jenna plasschaert

Hi Mr. Sato,

Thank you for your continued patience and determination to repeat the same thing over and over again, up until one understands what's actually going on. I really appreciate how realistic you are, which may have caused me to have great interest in chemistry as a career itself. It's nice to see the only smiling person in the room who also makes chemistry interesting.

Oh, and I really liked the sandwich analogy and your disney t-shirt.

Dear Mr. Sato,

you are one of the best teachers I have ever had. You have helped me find passion for chemistry. Before I did not understand the different areas of chemistry but you helped me discover a path I really love. I am so glad that you accepted to be our OAC teacher rep. Eventhough you never went on any hikes, sadly, it was still really fun having you for the meetings. although AP chem is difficult and not the same as it would have been

I am glad I took the class.

You really care for all your students and it shows. Thank you so much you had work and expecially thank you for all you have done for me!
